Description:

Global Emergency Department Information System Market is expected to reach US\$ 1293.36 Mn by 2024 from US\$ 415.52 Mn in 2016 at CAGR of 15.25% (Detailed analysis of the market CAGR is provided in the report). Major factors driving the emergency department information system market include a rise in patient flow at emergency departments, rising geriatric population, growing rate of accidents, and population growth. Emergency department information system captures real-time information about patients and to support the operational control of emergency departments. Emergency Department Information System is useful in managing data and workflow to support emergency department patient care and operations. However, I...
