In Supply Chain business, dealing with hundreds of goods and services daily for transportation is a daunting task. This is where Transportation management system or TMS comes in spotlight. A TMS manages the movement of physical goods in supply chain management system through performing different tasks. Some of these tasks include Purchase, tendering and contract management for freights, Regular premeditated transport planning, Master information management, Day to day transport planning, Freight billing and checking, KPI management and reporting. If you are looking forward to applying Transportation management system in your Supply Chain Management business then contact ESSPL for your SCM software related needs...
