Phone: 1-800-579-8710

Address: 459 Columbus Ave. #270, New York City, New York, United States

Price: Check with seller

Description:

Apart from the backflow assembly test report, you need to have a look at the signs that will help you to decide whether you need a backflow repair or not. A backflow device is also called the RDZ Valve or Reduced Pressure Zone Valve. This is a mechanical device that is found in a water piper especially at the meter. It allows the flow of water in only one direction.
