Address: US Home Inspector Training 2851 S Parker Road, Suite 988 Denver, CO 80014, Denver, Colorado, U

Price: Check with seller

Description:

One of the most common sources of moisture intrusion in the winter is a burst water pipe. When water freezes, it expands. With nowhere else to go, the ice in a water pipe fills the pipe completely becoming a blockage that prevents water flow. This creates excessive pressure in the pipe with no outlet until the pipe itself fails.
