Address: Bristol, Connecticut, United States

Price: 55.00 USD

Description:

When line aligning work is processing under all night version fields, it is making good job with a long wavelength made device of 980nm infrared line laser module. It is operating as an accessory part, after professional use of a CCD camera, black and white camera or infrared laser camera, it is able to work with high efficient infrared laser light conversion and highly clear infrared reference line projection under all night version fields. The usual work within 8 to 10 hours just enables superior nice thermal emitting, and highly stable IR line generation for multiple applications. This 980nm infrared line laser module applies qualified glass coated lens within 10 to 110 degree. It gets special use of a glass...
